**Capping Information & Procedures for Demolition / Temporary Disconnection**  
**Owner Certification**

The Egg Harbor Township Municipal Utilities Authority will review all requests for a Demolition Release to insure that the building sewer line is properly disconnected and sealed to prevent the intrusion of water, dirt and debris into the Authority's sewer system.

If the property will be permanently disconnected from the sewer system the line shall be capped at the location of the sewer cleanout. A permanent plug, of suitable size to match the existing cleanout, shall be installed into the cleanout wye.

If the sewer line is to be capped temporarily and the building sewer line will be reused for a new structure which will be constructed on the site, the building sewer shall be capped at some point on the building side of the sewer cleanout beyond the extent of the proposed work. The property owner shall choose the best location based on the location of the line and the anticipated work required for the demolition and reconstruction of the structure. **THE AUTHORITY INSPECTOR MUST APPROVE THE PROPOSED LOCATION OF THE SEWER LINE TO BE CUT AND CAPPED. The Authority Inspector will call the property owner and/or the contractor to schedule an appointment.**

The existing on-site sewer line shall be cut and capped using a permanent, watertight cap or plug manufactured for use with the material of the existing line. Once the sewer line has been capped, the Authority Inspector will conduct a final inspection at the site. The location of the temporary cap and type of cap must be approved by the Authority Inspector prior to issuing the Demolition Release / Temporary Disconnection Release.

***Prior to any new construction or improvements, a connection application must be filed.***

**The property owner must complete and sign this form.**

*Faxed or e-mailed copies will not be accepted. A signed original must be submitted to the EHTMUA.*
